Nozzle check

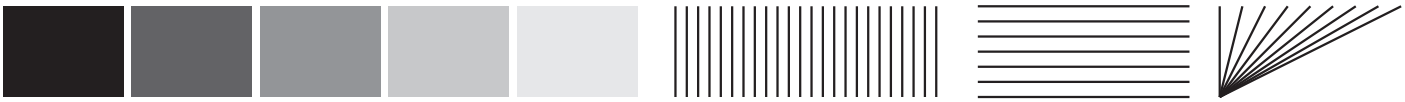
Each band uses one ink. A white gap, a missing line or a broken diagonal points at a clogged nozzle.

Cyan

Magenta

Yellow

Black



How to read it

Gaps in the solid steps: blocked nozzles. Run one head clean and reprint.

Missing vertical lines: the same nozzles, seen one at a time.

Broken or wavy diagonals: misfiring nozzles or head alignment drift.

Still failing after two cleans? Let the printer rest, then clean once more. Endless cleaning cycles just drain ink.
